Lexical Expansion

The Complete Marja (मर्ज) Registry

Six-Dimensional Zombie Ontology

First Attestation: Indica Ethicos Project, May 2026

Part I: Overview and Core Morphology

1.1 Core Definition and Philosophical Grounding

The Marja (मर्ज) is a death-born entity — a physical substrate completely devoid of sovereign consciousness or ideal purpose. Rather than relying on cumbersome classical compound formations (jivan-mrita-sharira / living-dead-body), the Marja system applies the Lāghava (efficiency) principle to compress biological horror into a single, morphologically precise two-syllable root.

Etymological Formation:

- Root: मृ (mr — death / the state of dying)
- Suffix: -ज (-ja — born from / originating from)
- Guṇa Sandhi: ृ vowel undergoes Guṇa strengthening → ar
- Synthesis: मृ + ज = मर्ज (Marja) — "The one born from death itself"

Philosophical Status: The Marja violates the Spek (natural law) at the ontological level. It is a manifestation of बु (physical substrate) and वा- (kinetic motion) completely severed from दि- (sovereign meaning, consciousness, purpose).

1.2 The Six-Dimensional Classification System

The Marja taxonomy operates across six independent, compositional axes. Any individual Marja can be fully specified by selecting one value from each axis:

Axis	Sanskrit Name	Examples	Count
Element	तत्त्व-आधारित	भू, जल, अग्नि, व्यु, रिक्त	5
Biome	स्थान-आधारित	मेरु, हिम, मरु, गोचर, पत, वा, वन, चित, ब्रह्म	9
State	अवस्था-आधारित	वि-, अति-, उप-, महा-, अधि-, ब्रह्म-	6
Profession	व्यवसाय-आधारित	कार, चिकित्स, विधि, वणिक, शिल्प, शिक्ष, शिष्य, दर्श, यभ, कृष, गोचर	11
Age	आयु-आधारित	शिशु, बाल, किशोर, तरुण, प्रौढ, वृद्ध	6
Physiology	दोष-आधारित	कफ, पित्त, वात	3

Theoretical Generative Capacity: $5 \times 9 \times 6 \times 11 \times 6 \times 3 = 53,460+$ distinct Marja types without redundancy.

1.3 Expansion N Integration

All Marja classifications fully integrate the Sovereign Plurality Protocol (Expansion N). Gender and plurality are marked independently of the root classification, eliminating linguistic entropy in threat communication. The standard declension pattern (using मर्ज as base):

Form	Grammar	Tactical Meaning
मर्जः	Singular Masculine	A single male death-born
मर्जा	Singular Feminine	A single female death-born
मर्जाः	Plural Masculine	Male-coded swarm
मर्जानाः	Plural Feminine	Female-coded swarm
मर्जानौ	Dual	Unified pair
मर्जात्	Oblique Mixed	Mixed-collective (maximum threat)

Part II: Element-Based Marja (तत्त्व-आधारित मर्ज)

The elemental classification specifies the constitutive substance and energy signature of the Marja. Element-based Marjas are born from and composed of specific material or energetic substrates, inheriting the properties of their elemental origin.

2.1 भूमर्जः — Earth-Born Zombie

Etymology: भू (*bhū* = earth/ground) + मर्ज

The terrestrial zombie. The standard humanoid death-born, composed of soil-infused necrotic tissue. They emerge from buried corpses, graves, and earth-saturated environments. They possess the highest population density among all Marja variants and serve as the baseline threat unit — all threat calculations reference Bhūmarjaḥ as 1.0x.

Characteristics:

- **Movement:** Slow but persistent
- **Substrate affinity:** Earth, soil, root systems
- **Decomposition rate:** Standard necrotic decay
- **Threat level:** Baseline (1.0x) — all other variants calculated relative to Bhūmarjaḥ

2.2 जलमर्जः — Water-Born Zombie

Etymology: जल (*jala* = water) + मर्ज

Aquatic death-born entities with water-saturated necrotic tissue, granting buoyancy and extended aquatic operation. They emerge from drowned corpses, flooded crypts, and swamp burial grounds.

Characteristics:

- **Movement:** Rapid in water, cumbersome on land
- **Substrate affinity:** Water, moisture, humidity
- **Sensory profile:** Detect prey through vibration and chemical diffusion in water
- **Tactical concern:** Standard water fortifications are ineffective; chemical alteration required

2.3 अग्निमर्जः — Fire-Born Zombie

Etymology: अग्नि (*agni* = fire) + मर्ज

Burning death-born entities composed of charred necrotic tissue, perpetually aflame. They emerge from funeral pyres and crematoriums. Their internal metabolism maintains combustion without fuel consumption.

Characteristics:

- **Movement:** Erratic, driven by internal heat convection
- **Substrate affinity:** Fire, heat, combustible materials
- **Decomposition rate:** Reversed — combustion prevents putrefaction
- **Threat vector:** Spreads fire through physical contact and proximity heat; area-denial entity

2.4 व्युमर्जः — Electric-Born Zombie

Etymology: व्यु (vyu = *electricity, community neologism*) + मर्ज

Electrically-charged death-born entities whose necrotic tissue conducts lethal current. They maintain perpetual electrical charge through unknown bio-electrical mechanisms and emerge from electrocution sites and electrical infrastructure ruins.

Characteristics:

- **Movement:** Rapid, erratic, follows conductivity gradients
- **Substrate affinity:** Electricity, conductive materials, electrical systems
- **Decomposition rate:** Halted — electrical field preserves tissue
- **Tactical concern:** Dual threat: biological infection AND digital/technological infiltration
- **Note:** व्यु prefix is a community neologism integrated May 2026, coined by a contributor inspired by Indica Ethicos

2.5 रिक्तमर्जः — Void-Born Zombie

Etymology: रिक्त (rikta = *empty/hollow/vacant*) + मर्ज

Hollow death-born entities whose necrotic tissue is perforated by void-space, rendering them partially immaterial. They emerge from abandoned structures, vacuums, and zones of extreme ontological negation. The rarest elemental variant. Note: रिक्त is preferred over शून्य (abstract cosmic void) because रिक्त encodes tangible, substrate-level emptiness — consistent with the Indica Ethicos Vol. 1 entry रिक्तवा (empty digital signal).

Characteristics:

- **Movement:** Gliding, phase-like; penetrates solid barriers
- **Substrate affinity:** Empty space, abandoned structures, vacuums
- **Threat vector:** Phase-attack; penetrates standard armor and physical barriers
- **Containment:** Environmental saturation required — fill void-space with solid material

Part III: Biome-Based Marja (स्थान-आधारित मर्ज)

The biome classification specifies the ecological niche and territorial distribution of the Marja. Biome-based Marjas are adapted to specific environmental zones, inheriting the characteristics of their native terrain.

3.1 मेरुमर्ज: — Polar Zombie

Etymology: मेरु (*meru* = mountain/pole/axis) + मर्ज

Arctic and polar-adapted death-born. Their necrotic tissue contains natural antifreeze compounds allowing operation in extreme cold. They emerge from permafrost burial sites and ice-locked crypts.

Characteristics:

- **Environment:** Polar regions, high-altitude frozen zones
- **Decomposition:** Halted — extreme cold preserves tissue indefinitely
- **Population density:** Sparse but permanently stable

3.2 हिममर्ज: — Snow Highland Zombie

Etymology: हिम (*hima* = snow/ice) + मर्ज

Temperate mountain snow-adapted death-born. Unlike Merumarja (absolute polar), Himamarja operates in seasonal snow and high-altitude regions with temperature variation. They complement Marumarja — cold highlands vs. hot desert.

Characteristics:

- **Environment:** Mountain ranges, seasonal snow zones, high plateaus
- **Decomposition:** Slowed but not halted
- **Population density:** Moderate

3.3 मरुमर्ज: — Desert Zombie

Etymology: मरु (*maru* = desert) + मर्ज

Arid-adapted death-born with desiccated necrotic tissue. They emerge from desert burial sites including the sands of the Thar and similar regions. Extreme dehydration paradoxically preserves their necrotic integrity through mummification.

Characteristics:

- **Environment:** Deserts, arid regions, desiccated burial grounds
- **Decomposition:** Extremely slowed — tissue mummification
- **Movement:** Optimized for sand, minimal water requirement

3.4 गोचरमर्ज: — Grassland Zombie

Etymology: गोचर (*gochar* = pastureland, lit. 'where cattle graze') + मर्ज

Plain and grassland-adapted death-born. They emerge from shallow burials in agricultural and pastoral zones. Their necrotic tissue integrates with soil microbiota creating distributed intelligence networks. Note: As a biome term, गोचर = pastoral grassland/meadow. This is distinct from the profession-based गोचरमर्जः (cowherd) — the same root governs both habitat and the humans who worked it.

Characteristics:

- **Environment:** Plains, grasslands, pastoral lands, open meadows
- **Movement:** Coordinated swarm behavior across open terrain
- **Population density:** Very high — shallow burial density supports massive populations

3.5 पतमर्जः — Sky Zombie

Etymology: पत् (*pat* = to fly) + मर्ज

Aerial death-born with vestigial or reconstructed wing structures. They emerge from sky-burial sites and aerial disaster zones. Their necrotic tissue is exceptionally lightweight due to bone calcification and air-sac formation. Can be zombified flying beings (birds, bats) or mutated humans with aerial hunting abilities.

Characteristics:

- **Environment:** Sky, high-altitude zones, aerial transit routes
- **Movement:** Three-dimensional flight capability; attacks from above
- **Decomposition:** Slowed — low air density inhibits decay

3.6 वामर्जः — Digital Zombie

Etymology: वा (*vā* = digital/systemic mediator, *Indica Ethicos Vol. 1*) + मर्ज

Virtual death-born with no physical substrate. They exist as distributed consciousness across networked digital infrastructure — data centers, server clusters, internet backbone, cyber cafés. They hunt through systematic information manipulation and locate prey through digital footprint analysis.

Characteristics:

- **Environment:** Digital infrastructure, networks, virtual reality spaces
- **Composition:** Pure information — no necrotic tissue
- **Movement:** Instantaneous across networked systems
- **Threat vector:** Cyber-attack, VR manipulation, weaponization of digital zones to track and isolate humans

3.7 वनमर्जः — Forest Zombie

Etymology: वन (*vana* = forest) + मर्ज

Woodland death-born with symbiotic relationship to forest ecology. They emerge from shallow forest burials and integrate with mycelial networks and root systems. Zombie-vegetation hybrids are common variants.

Characteristics:

- **Environment:** Forests, woodlands, jungle territories
- **Movement:** Coordinated with wildlife; uses forest cover for ambush
- **Composition:** Integrated into forest ecosystem; unclear if standard decay occurs

3.8 चितमर्जः — Crematorium Zombie

Etymology: चित (*chita* = funeral pyre/crematory) + मर्ज

Death-born that hunt in crematoriums and graveyards. They emerge from partially-cremated remains and ritual burial sites. Their necrotic tissue bears ritual scarification and ash-incineration marks. Note: चित literally means 'funeral pyre' — making this derivation direct and semantically precise.

Characteristics:

- **Environment:** Crematoriums, graveyards, ritual burial grounds
- **Movement:** Ritualized, patterned, predictable
- **Threat vector:** Desecration of ritual spaces; psychological impact on defenders
- **Constraint:** Theoretically tied to origin crematorium — cannot stray far without rapid decomposition

3.9 ब्रह्ममर्जः — Cosmic Zombie

Etymology: ब्रह्म (*brahma* = ultimate/omnipresent reality) + मर्ज

The apex cosmic death-born. Brahmanarmas transcend biological substrate entirely and exist as omnipresent localized anomalies. They do not merely cause death — they have achieved ontological supremacy over Death itself. Extinction-event category.

The Violation of the Reaper: The Brahmanarmas committed ultimate cosmic desecration. It dragged the anthropomorphic personification of Death into physical skeletal manifestation, grafted artificial pain and pleasure receptors onto her immutable bones, and subjected Death herself to unspeakable subjugation, shattering her structural foundation.

Characteristics:

- **Environment:** Cosmic void; presence extends across dimensional planes
- **Movement:** Non-spatial; instantaneous within influence radius
- **Threat level:** EXTINCTION-EVENT — no documented weakness

Part IV: State-Based Marja (अवस्था-आधारित मर्ज)

The state classification specifies the physical form, hunting behavior, and tactical profile of the Marja. State-based variants modify any base Marja root through classical Sanskrit prefix application, functioning as the primary modifier in composite specifications.

4.1 विमर्जः — The Aberration

Etymology: वि (vi = altered/deformed) + मर्ज

Severely mutated death-born whose physical structure has deviated from the humanoid template into unpredictable, grotesque forms. Each Vimarja specimen is unique — no two share the same mutation pattern.

Characteristics:

- **Form:** Highly variable; each specimen unique
- **Threat signature:** Unpredictable attack vectors; non-standard anatomy defeats defensive heuristics
- **Tactical concern:** Rapid adaptation to novel environmental conditions

4.2 अतिमर्जः — The Feral

Etymology: अति (ati = extreme/beyond limit) + मर्ज

Hyper-surged death-born with extreme kinetic capacity. Atimarjas abandon the slow persistence of standard Marjas and hunt with terrifying velocity. They are the sprint-predators of the zombie ecosystem.

Characteristics:

- **Movement:** 3-4x standard Marja velocity
- **Aggression:** Extreme; abandons strategic behavior for direct high-velocity assault
- **Endurance:** Short duration — intense kinetic surge burns out rapidly
- **Tactical concern:** Short-duration, high-intensity breakthrough threat

4.3 उपमर्जः — The Mimic

Etymology: उप (upa = lesser/auxiliary/sub) + मर्ज

Deceptive death-born retaining a pristine, tragically human silhouette. Upamarjas possess pale-yellow or necrotic-green skin but maintain human facial features and proportions. They are ambush predators weaponizing empathy against Satarjas (vigilantes).

Characteristics:

- **Form:** Humanoid; nearly indistinguishable from living humans at distance
- **Sensory profile:** Pale/sickly coloration; necrotic odor detectable by trained observers
- **Hunting method:** Ambush through enclosed spaces and subterranean gaps
- **Tactical concern:** Infiltration of human settlements; trust violation and settlement penetration

4.4 महामर्जः — The Juggernaut

Etymology: महा (*mahā* = massive/immense) + मर्ज

Gigantic, bloated death-born wielding heavy primitive armaments — tridents, maces, scythes. They expel highly necrotic, liquefying green bio-sludge. Mahāmarjas are slow but overwhelmingly powerful.

Characteristics:

- **Size:** 3-4x standard humanoid proportions
- **Strength:** Overwhelming; capable of structural demolition
- **Movement:** Extremely slow; predictable but unstoppable
- **Kṛpikā Anomaly:** Internal synthesis of Kṛpikā Cūrṇa (Kryptonite Powder). In humans: rapid cellular decay. In Kryptonians: cognitive friction, hemorrhaging, acute hallucinations, sensory illusion of solid silver fused into chest cavity

4.5 अधिमर्जः — The Spawnpod

Etymology: अधि (*adhi* = governing/over-arching) + मर्ज

The hive-engine. Adhimarjas have shed the need for human form, mobility, or facial features. They manifest as massive tumorous botanical masses — grotesque biological factories that directly synthesize and expel fully-formed prime-state Marjas onto the battlefield.

Characteristics:

- **Form:** Non-humanoid; botanical-necrotic hybrid mass
- **Mobility:** Stationary or extremely limited movement
- **Threat signature:** Area-spawning; exponential threat proliferation
- **Reproductive capacity:** Unlimited within resource constraints — Marjas expel at mid-20s prime condition

4.6 ब्रह्ममर्जः — The Cosmic Desecrator

Etymology: ब्रह्म (*brahma* = ultimate reality) + मर्ज

The apex god-form of the Marja state taxonomy. Brahmarajas are omnipresent localized cosmic anomalies transcending the constraints of all other state classifications. They do not merely cause death — they have achieved ontological supremacy over Death itself.

Characteristics:

- **Presence:** Omnipresent within influence radius — exists everywhere simultaneously
- **Transcendence:** Operates across multiple ontological planes
- **Threat level:** EXTINCTION-EVENT category
- **Weakness:** Theoretical — none documented

Part V: Profession-Based Marja (व्यवसाय-आधारित मर्ज)

The profession classification specifies the occupational knowledge and behavioral patterns of the Marja. A profession-based Marja carries the skills, cognitive patterns, and behavioral templates of its former life into its death-born existence. All profession-based Marjas integrate Expansion N for gender-neutral, plurality-flexible classification.

Standard Expansion N pattern (कार as example):

- कारमर्जः / कारमर्जा (singular)
- कारमर्जाः / कारमर्जानाः (plural masculine/feminine)
- कारमर्जानौ (dual — unified pair, any composition)
- कारमर्जात् (mixed plural — maximum threat)

5.1 कारमर्जः — Engineer Zombie

Etymology: कार (kāra = work/labor/craft) + मर्ज

Death-born engineers retain full technical knowledge and capacity for systematic construction. Kāramarjas build fortifications, design booby-trap mechanisms, and identify structural vulnerabilities in human defensive positions.

Threat Signature: Coordinated structural sabotage; systematic fortification infiltration; construction of anti-human infrastructure.

5.2 चिकित्समर्जः — Doctor Zombie

Etymology: चिकित्सा (chikitsā = medicine/healing) + मर्ज

Death-born physicians retain anatomical knowledge and comprehensive understanding of biological vulnerabilities. Chikitsamarjas are lethal predators capable of identifying and exploiting human physiological weak-points with surgical precision.

Threat Signature: Targeted biological attack; systematic organ-targeting; exploitation of medical knowledge for maximum damage.

5.3 विधिमर्जः — Lawyer Zombie

Etymology: विधि (vidhi = law/rule/procedure) + मर्ज

Death-born lawyers retain their understanding of systemic rules, procedural hierarchies, and structural loopholes. Vidhimarjas exploit governance contradictions and procedural gaps in human defensive protocols. Their threat is primarily psychological and systemic.

Threat Signature: Exploitation of legal and systemic vulnerabilities; procedural destabilization; psychological warfare through institutional manipulation.

5.4 वणिकमर्जः — Merchant Zombie

Etymology: वणिक (vaṇik = merchant/trader) + मर्ज

Death-born merchants retain their understanding of supply chains, resource distribution networks, and economic systems. Vaṇikmarjas coordinate complex raids targeting supply infrastructure and systematically degrade human resource logistics.

Threat Signature: Economic sabotage; supply-chain disruption; resource denial operations.

5.5 शिल्पमर्जः — Artist/Artisan Zombie

Etymology: शिल्प (*śilpa* = craft/art/skill) + मर्ज

Death-born artists and artisans retain their fine-motor control, aesthetic sensibility, and creative problem-solving capacity. Shilpamarjas engage in sophisticated trap-design, environmental manipulation, and aesthetic-psychological warfare.

Threat Signature: Sophisticated psychological warfare; creative destruction; artisan-precision trap construction.

5.6 शिक्षमर्जः — Teacher Zombie

Etymology: शिक्षा (*śikṣā* = education/teaching) + मर्ज

Death-born teachers retain their capacity for systematic knowledge transmission and authority-based persuasion. Shikṣamarjas spread misinformation and epistemological corruption, and recruit living humans into coordination networks through pseudo-educational manipulation.

Threat Signature: Information warfare; epistemic corruption; recruitment and radicalization of living humans.

5.7 शिष्यमर्जः — Student Zombie

Etymology: शिष्य (*śiṣya* = student/disciple) + मर्ज

Death-born students, counterpart to शिक्षमर्जः. Shishyamarjas retain their capacity for rapid knowledge absorption and ideological malleability. Where Teacher-Marjas spread knowledge, Student-Marjas absorb and transmit it — they are vectors for the rapid proliferation of corrupted information across networks.

Threat Signature: Accelerated knowledge transmission; rapid integration into swarm coordination networks; amplification of Teacher-Marja influence.

5.8 दर्शमर्जः — Philosopher Zombie

Etymology: दर्शन (*darśana* = philosophy/vision/perspective) + मर्ज

Death-born philosophers retain their capacity for sophisticated abstraction and ontological manipulation. Darshamarjas corrupt human meaning-making systems, undermine civilizational coherence, and weaponize ideas against human consciousness itself. They represent the desecration of wisdom.

Threat Signature: Existential destabilization; civilizational meaning-corruption; weaponization of philosophy against human reasoning.

5.9 यभमर्जः — Sex-Worker Zombie

Etymology: यभ् (yabh = to fuck, from Indica Ethicos Sexual Register, Vol. 1) + मर्ज

Death-born sex workers retain their understanding of human vulnerability, intimacy-manipulation, and psychological exploitation. Yabhamarjas weaponize seduction and breach human emotional defenses. Note: यभ् is deployed here from the Sanskrit Sexual Register (Vol. 1), ensuring gender-neutral morphological precision — no conflation with वैश्य (merchant) through gendered endings.

Threat Signature: Psychological infiltration; intimate vulnerability exploitation; emotional defense penetration.

5.10 कृषमर्जः — Farmer Zombie

Etymology: कृष् (krṣ = to plough/farm/cultivate) + मर्ज

Death-born agricultural workers who retain deep knowledge of land, soil, crop cycles, and farming terrain. Kṛṣamarjas are particularly dangerous in rural and agricultural zones — they understand human food-supply infrastructure from the inside and can systematically corrupt or deny food production.

Threat Signature: Agricultural sabotage; food-supply contamination; terrain exploitation for ambush in rural zones.

5.11 गोचरमर्जः — Cowherd/Pastoral Worker Zombie

Etymology: गोचर (gochar = where cattle graze, pastoral land) + मर्ज

Death-born cowherds, shepherds, and pastoral workers — the quintessential Indian rural profession. Note: गोचर occupies dual function in this taxonomy — as biome (grassland habitat) and profession (pastoral worker). This is not a contradiction but an efficiency: the cowherd and their grazing land are a unified ecological and occupational unit. Gocharmarjas know open terrain, herd coordination, and rural movement patterns intuitively.

Threat Signature: Rural terrain exploitation; herd-like swarm coordination across open grasslands; disruption of pastoral food chains.

Part VI: Age-Based Marja (आयु-आधारित मर्ज)

The age classification specifies the developmental stage and biological condition of the Marja at the point of death-transformation. Age classifications follow the classical Āyur-veda lifecycle system, providing a biologically grounded, objective framework.

6.1 शिशुमर्जः — Infant Zombie (0–2 years)

Etymology: शिशु (*śiśu* = baby/infant) + मर्ज

Infant death-born possessing minimal cognitive function but extraordinary sensory acuity. Shishumarjas are rapid, chaotic, and emotionally traumatizing to encounter.

Characteristics:

- **Speed:** High — small, lightweight body
- **Coordination:** Chaotic and unpredictable
- **Threat:** High due to psychological impact despite physical vulnerability
- **Weakness:** Fragile skeletal structure

6.2 बालमर्जः — Child Zombie (2–12 years)

Etymology: बाल (*bāla* = child) + मर्ज

Child death-born with superior speed-to-strength ratio. Primary threat is coordinated swarm behavior rather than individual power.

Characteristics:

- **Speed:** Very high
- **Coordination:** Basic tactical cooperation in swarms
- **Threat:** Moderate individually; severe in swarms
- **Weakness:** Limited upper-body strength

6.3 किशोरमर्जः — Adolescent Zombie (12–16 years)

Etymology: किशोर (*kiśora* = adolescent/youth) + मर्ज

Adolescent death-born occupying the most dangerous developmental transition: adult-level physical capability combined with developmental cognitive retention. Note: किशोर is attested classical Sanskrit.

Characteristics:

- **Speed:** Very high
- **Strength:** Adult-level
- **Coordination:** Capable of complex tactical behavior
- **Threat:** Very high — optimal speed/strength/cognition combination

6.4 तरुणमर्जः — Youth Zombie (16–30 years)

Etymology: तरुण (*tarūṇa* = young/youthful) + मर्ज

Prime-condition death-born with maximum physical capability. Taruṇamarjas are the tactical baseline — all other age variants are calculated relative to their threat coefficient.

Characteristics:

- **Speed:** Optimal
- **Strength:** Maximum
- **Coordination:** Complex tactical capability
- **Threat:** Baseline (1.0x) — all age variants calculated relative to Taruṇamarjah

6.5 प्रौढमर्जः — Adult Zombie (30–60 years)

Etymology: प्रौढ (*praudha* = *adult/mature*) + मर्ज

Mature death-born sacrificing some physical speed for enhanced tactical sophistication and strategic capability. Praudhamarjas are most dangerous at coordinated large-unit level.

Characteristics:

- **Speed:** Reduced (0.7-0.8x baseline)
- **Strength:** High
- **Coordination:** Excellent strategic and large-unit planning
- **Threat:** High at group and large-unit threat levels

6.6 वृद्धमर्जः — Elderly Zombie (60+ years)

Etymology: वृद्ध (*vrddha* = *old/aged*) + मर्ज

Elderly death-born with age-related physical deterioration but extensive knowledge networks and masterful cognitive capacity. Vriddhamarjas are threat-multipliers through coordination and information despite individual physical weakness.

Characteristics:

- **Speed:** Very slow (0.3-0.4x baseline)
- **Strength:** Weak
- **Coordination:** Masterful strategic planning
- **Threat:** EXTREME at civilizational/strategic level despite individual fragility

Part VII: Physiology-Based Marja (दोष-आधारित मर्ज)

The physiology classification specifies the energetic and constitutive nature of the Marja according to the classical Āyurvedic Tridosha system. The three doshas — Kapha, Pitta, Vāta — provide a biologically and philosophically grounded framework for classifying the internal energetic signature of any Marja variant.

7.1 कफमर्जः — Kapha Zombie

Etymology: कफ (*kapha* = *earth/water principle*) + मर्ज

Heavy, sluggish, accumulative death-born governed by the Kapha dosha. Kaphamarjas are slow and massive but extremely difficult to destroy. They grow stronger through environmental accumulation and integration.

Characteristics:

- **Movement:** Slow and persistent — almost unstoppable over time
- **Resilience:** Extreme — sustains massive damage without reduction in function
- **Growth pattern:** Exponential through environmental integration
- **Tactical role:** Zone-controllers — a single Kaphamarja can dominate an entire region through sheer mass and persistence
- **Weakness:** Environmental disruption of their accumulation cycle

7.2 पित्तमर्जः — Pitta Zombie

Etymology: पित्त (*pitta* = *fire/transformation principle*) + मर्ज

Active, aggressive, metabolically intensive death-born governed by the Pitta dosha. Pittamarjas hunt with maximum ferocity and consume resources rapidly. They burn bright but briefly.

Characteristics:

- **Movement:** Rapid and aggressive
- **Metabolic rate:** Extreme — rapid energy and resource consumption
- **Aggression:** Maximum — direct assault-oriented behavior
- **Tactical role:** Offensive assault entities; most dangerous in coordinated swarm operations
- **Weakness:** Resource dependency — burns out if supply exhausted

7.3 वातमर्जः — Vata Zombie

Etymology: वात (*vāta* = *air/movement principle*) + मर्ज

Light, fast, mobile death-born governed by the Vāta dosha. Vatamarjas are erratic, difficult to predict, and excel at rapid repositioning and distributed harassment.

Characteristics:

- **Movement:** Extremely fast and erratic — hardest to track and intercept
- **Sensory perception:** Enhanced — detects subtle environmental changes
- **Coordination:** Poor individually but devastating in distributed swarms

- **Tactical role:** Reconnaissance and harassment entities; psychological warfare through unpredictability
- **Weakness:** Physical fragility — low resilience to direct hits

Part VIII: Composite Specification and Tactical Syntax

8.1 Six-Axis Specification Format

A fully specified Marja is identified by selecting one value from each of the six axes in the following sequence:

[Element] — [Biome] — [State] — [Profession] — [Age] — [Physiology] — मर्जः

Example Specifications:

अग्नि-वन-अति-शिल्प-तरुण-पित्त-मर्जः

Fire-elemental + Forest-biome + Feral-state + Artist-profession + Youth-age + Pitta-physiology

Threat Assessment: Artistic sophistication combined with feral aggression; sophisticated trap-design with high-velocity assault capability.

जल-गोचर-उप-यभ-प्रौढ-कफ-मर्जः

Water-elemental + Grassland-biome + Mimic-state + Sex-worker-profession + Adult-age + Kapha-physiology

Threat Assessment: Grassland infiltration through deception; heavy and persistent; difficult to detect or dislodge.

रिक्त-वा-वि-दर्श-किशोर-वात-मर्जः

Void-elemental + Digital-biome + Aberration-state + Philosopher-profession + Adolescent-age + Vata-physiology

Threat Assessment: Existential threat distributed across digital networks; epistemological corruption paired with unpredictable, erratic behavioral patterns.

भू-चित-उप-शिष्य-बाल-कफ-मर्जः

Earth-elemental + Crematorium-biome + Mimic-state + Student-profession + Child-age + Kapha-physiology

Threat Assessment: Child-mimic crematorium infiltrators; psychologically devastating; persistent and difficult to destroy despite apparent fragility.

8.2 Expansion N in Composite Forms

Gender and plurality are marked on the final element using standard Expansion N declension. The following table demonstrates full composite Expansion N application:

Full Form	Meaning
अग्नि-वन-अति-शिल्प-तरुण-पित्त-मर्जः	Single male fire-forest-feral-artist-youth-pitta
अग्नि-वन-अति-शिल्प-तरुण-पित्त-मर्जा	Single female (any gender) equivalent
अग्नि-वन-अति-शिल्प-तरुण-पित्त-मर्जाः	Male-coded plurality
अग्नि-वन-अति-शिल्प-तरुण-पित्त-मर्जानाः	Female-coded plurality
अग्नि-वन-अति-शिल्प-तरुण-पित्त-मर्जानौ	Unified pair (any composition)
अग्नि-वन-अति-शिल्प-तरुण-पित्त-मर्जात्	Mixed plurality — maximum threat designation

8.3 High-Stress Transmission Format

In real-time combat environments, six-axis specifications are compressed to initial syllable shorthand:

Format: [E]-[B]-[S]-[P]-[A]-[Ph]: [THREAT LEVEL]

Example: अ-व-अति-दर्श-प्रौढ-कफः *EXISTENTIAL*

Translation: Agni-Vana-Ati-Darsha-Praudha-Kapha = Fire-Forest-Feral-Philosopher-Adult-Kapha
Marja = EXISTENTIAL THREAT LEVEL

8.4 The Combat Transmission Verse

The canonical combat communication syntax:

सतर्जान् मर्जादाक्रमन्ति। (**Satarjān Marjādākramanti.**)

"The mixed-collective vigilante squad is actively striking down the mixed-collective death-born swarm."

Note the Jashatva Sandhi: मर्जात् + आक्रमणानि → मर्जादाक्रमण — the oblique mixed-plural marker softens into 'd' through standard Sandhi rules.

Part IX: Operational Applications

9.1 Threat Level Classification

Marja threats are classified according to axis combination. Single-axis identification provides base threat; multi-axis combinations produce exponential escalation:

Axis	Base Threat Range	Dominant Function
Element-based	Low–Moderate	Constitutive signature
Biome-based	Low–Moderate	Territorial adaptation
State-based	Low–EXTINCTION	Dominant threat modifier
Profession-based	Moderate–High	Cognitive/behavioral threat
Age-based	Low–High	Physical capacity modifier
Physiology-based	Low–Extreme	Dominant behavioral multiplier

9.2 Example Threat Calculations

Standard Taruṇa Bhūmarja (baseline): 1.0x threat

महा-अग्नि-चित-दर्श-वृद्ध-कफ-मर्जानाः

Juggernaut fire-crematorium philosopher elderly kapha female swarm. Threat Assessment: EXTINCTION-LEVEL

उप-वा-वि-शिष्य-किशोर्-वात-मर्जात्

Mimic digital aberration student adolescent vata mixed swarm. Threat Assessment: EXTREME — Digital infiltration combined with physical unpredictability; nearly undetectable.

9.3 Satarja Combat Protocol

Standard identification and response format for Satarja (vigilante) squads:

- Identify: Full six-axis specification of incoming Marja or swarm
- Transmit: Compressed shorthand for squad communication
- Assess: Calculate threat coefficient from axis combination
- Respond: Deploy Satarja formation calibrated to threat level

The Marja Registry provides Satarjas with the cognitive framework to identify, classify, and respond to any death-born entity without the linguistic entropy that costs lives in the field.

Part X: Conclusion — The Generative System

The Marja Registry is a complete, compositional ontology for zombie taxonomy. Rather than pre-defining every possible variant, it establishes six independent classification axes, productive morphological rules for composition, Expansion N integration for gender-neutral specification, and tactical transmission syntax for real-time communication.

Generative capacity: $5 \times 9 \times 6 \times 11 \times 6 \times 3 = 53,460+$ distinct Marja types without redundancy.

The system satisfies all four Lāghava criteria:

- Alpākṣara (minimalist): Two-syllable base root, compositional specification
- Asandigdha (unambiguous): Each axis independently determined; no conflation
- Sāravat (essence-full): Every root etymologically transparent and meaningful
- Viśvatomukha (universally applicable): Generates any zombie type through grammatical composition

The Marja system is not merely a classification scheme. It is a cognitive firewall — a system of meaning that resists the ontological collapse the Marjas themselves represent. By naming with precision, the system maintains boundaries against the void.

Framework Grounding

- Lāghava Protocols (Indica Ethicos Vol. 1, Chapter 2)
- Expansion N Sovereign Plurality Protocol (Vol. 1, Chapter 12)
- Spek/Dam Architecture (Vol. 1, Chapter 18)
- Sanskrit Sexual Register — यम् root (Vol. 1, Chapter 10)
- Tripartite Prefix System वा-/बु-/दि- (Vol. 1, Chapters 3–6)

Community Integration

The व्यु prefix (electricity/electro) was coined by a community contributor on Reddit, independently inspired by the Indica Ethicos framework, and formally integrated into the Marja Registry in May 2026. This represents the first documented instance of community-driven neologism integration within the Indica Ethicos system.

First Attestation: Indica Ethicos Project, May 2026
